All of the air compressors manufactured by General Air Products are assembled, tested and labeled in our facility in Exton, Pennsylvania in the United States. Our air compressors meet the Produced in the United States requirement of the American Recovery & Reinvestment Act (ARRA) Section 1605 Buy American provision.

Please call or visit our web site for our complete Buy America Information statement to be included for job submittals.

12 Technical Information
General Air Products’ newly improved OL Plus series Oil Less Riser Mounted Air Compressors are the same compressors the fire sprinkler industry has come to rely on but with 30 years’ worth of experience based improvements built in! All of our OL Plus single phase standard units and low pressure units are UL 1450 listed for fire protection, fully automatic, and virtually maintenance free. We have added a 30 inch flex line to the riser mounting kit and pressure switch that were already included to allow for a fast and easy installation. Our standard OL Plus series units are single phase, pre-wired, adjustable up to 60 psi and factory pre-set. Low Pressure, High Pressure, 3 Phase and 50Hz OL Plus Series units are available. While we do include a riser mounting kit these units can be wall or floor mounted as well.

**RANGE:** The OL Plus Series air compressors cover 30 minute fill up times on sprinkler systems up to 1225 gallons in size.

**FEATURES**

- UL 1450 Listed for Fire Protection
- 60 PSI Max Pressure Rating on Standard Units
- Factory Pre-set Pressure Switch
- Pre-wired and Pre-tested
- Permanently Lubricated Bearings
- New Voltage Options
- Reduced overall unit weight by 20%
- All Units Tested Before Leaving Factory
- Lifetime Customer Service & Technical Support

**WHAT’S INCLUDED**

- Oil Less Piston Compressor
- NEW 30" Stainless Steel Flex Hose
- NEW Improved Riser Mounting Kit
- UL Listed Pressure Switch
- Bubble Tight Air Check Valve
- ASME Pressure Safety Valve
- Air Intake Filter

**AVAILABLE AS**

- Single Phase (Standard) (Pre-set 40 psi off)
- Three Phase
- Low Pressure (Pre-set 18 psi off)
- High Pressure (Pre-set 100 psi off)
- 50 Hz (electrical setting for use outside of the USA)
The improvements continue in our OLT Plus Series tank mounted oil less air compressors. Standard single phase units are UL 1450 listed for fire protection and integrally mounted on ASME air receivers. We have improved the durability, reduced noise and simplified installation with the inclusion of a 30 inch flex hose and 4 vibration pads. Tank mounted air compressors are recommended as the ideal compressor type for dry pipe sprinkler applications. We highly recommend a tank mounted compressor when an accelerator is required on the sprinkler system. Our standard OLT Plus series units are single phase, pre-wired with pressure factory pre-set and adjustable up to 60 psi. High Pressure, 3 Phase and 50Hz OLT Plus Series units are also available.

**RANGE:** The OLT Plus Series air compressors cover 30 minute fill up times on sprinkler systems up to 1225 gallons in size.

**NOTE:** Each individual system requires an air maintenance device (Model AMD-1) per NFPA 13. Multiple dry valves may be supplied from a single tank mounted compressor when using our AMD-1 air maintenance device (page 10).

**WHAT’S INCLUDED**

- Oil Less Piston Compressor
- ASME Coded Pressure Vessel
- NEW Vibration Isolation Pads (4)
- UL Listed Pressure Switch
- NEW 30” Stainless Steel Flex Hose
- Bubble Tight Air Check Valve (seated in tank)
- Air Pressure Gauge
- ASME Pressure Safety Valve
- Manual Tank Drain
- Air Intake Filter

**AVAILABLE AS**

- Single Phase (Standard) (Pre-set 40 psi off)
- Three Phase
- High Pressure (Pre-set 100 psi off)
- 50 Hz (electrical setting for use outside of the USA)
Our LT Series Tank Mounted Lubricated Air Compressors are integrally mounted on ASME coded air receivers. They arrive ready for installation with a quart of compressor oil (shipped loose) and a factory pre-set pressure switch. These units can be adjusted up to 60 psi and leave our factory pre-set for 45 psi on and 60 psi off. Single phase, three phase, high pressure and 50Hz units are available. As with all of our compressors, the LT Series is specifically engineered to pressurize dry and pre-action sprinkler systems according to the parameters of NFPA 13. Tank mounted air compressors are recommended as the ideal compressor type for dry pipe sprinkler applications. We highly recommend a tank mounted compressor when an accelerator is required on the sprinkler system.

**RANGE:** The LT Series air compressors cover 30 minute fill up times on sprinkler systems up to 2500 gallons in size.

**NOTE:** Each individual system requires an air maintenance device (Model AMD-1) per NFPA 13. Multiple dry valves may be supplied from a single tank mounted compressor when using our AMD-1 air maintenance device (page 10).

---

**FEATURES**

- All Industrial Duty Components
- Pressure switch adjustable up to 60 psi
- Factory Pressure Settings: 45 psi on / 60 psi off
- Lifetime Customer Service and Technical Support

**WHAT’S INCLUDED**

- NEMA Rated / UL Listed Motor
- Industrial Duty Compressor Pump
- ASME Coded Pressure Vessel
- UL Listed Pressure Switch
- Enclosed Belt Guard
- Bubble Tight Air Check Valve (seated in tank)
- Air Pressure Gauge
- ASME Pressure Safety Valve
- Manual Tank Drain
- 1 Quart of Compressor Oil (shipped loose)
- Air Intake Filter

**AVAILABLE AS**

- Single Phase (Standard) (Pre-set 60 psi off)
- Three Phase
- High Pressure (Pre-set 100 psi off)
- 50 Hz (electrical setting for use outside of the USA)
The L Series base mounted, oil lubricated units are a rugged, old school style, workhorse of an air compressor. Single phase, three phase, high pressure and 50Hz units are available. As with all of our compressors, the L Series is specifically engineered to pressurize dry and pre-action sprinkler systems according to the parameters of NFPA 13.

**RANGE:** The L Series air compressors cover 30 minute fill up times on sprinkler systems up to 2500 gallons in size.

**NOTE:** L Series units do not include a pressure switch, automatic operation requires the purchase of an AMD-2 air maintenance device (page 10) to start and stop the air compressor.

### FEATURES

- All Industrial Duty Components
- Lifetime Customer Service & Technical Support

### WHAT’S INCLUDED

- NEMA Rated / UL Listed Motor
- Industrial Duty Compressor Pump
- Enclosed Belt Guard
- Pressure Relief Valve (shipped loose)
- Air Intake Filter
- 1 Quart of Compressor Oil (shipped loose)

### AVAILABLE AS

- Single Phase (Standard)
- Three Phase
- High Pressure
- 50 Hz (electrical setting for use outside of the USA)
DRY AIR PAC
COMPRESSOR-DRYER PACKAGE

General’s DAP Series Dry Air Pac™ is an FM Approved, twin tower regenerative dryer / compressor package. This turnkey package is designed to provide the sprinkler system with moisture free air to a -40° F dew point. The air compressor is designed to fill the sprinkler system in accordance with NFPA 13 standards, as well as provide the higher pressure needed to allow the twin tower regenerative dryer to function properly. Prior to entering the regenerative air dryer, an air cooled aftercooler cools the compressor’s hot discharge air to a maximum 10° F above ambient. A coalescing prefilter with differential pressure gauge removes oil vapor and other contaminants that can destroy the desiccant in the dryer towers. A combination particulate filter and regulator prevents downstream migration of desiccant dust while regulating air pressure to the sprinkler system. All components are pre-piped, pre-tested, and pre-wired for ease of mechanical and electrical installation on site. Each unit includes a UL Listed, FM Approved Air Maintenance Device. -100° F dew point is achievable - consult factory for details. Applications for the Dry Air Pac™ include, but are not limited to Freezer Rooms, Cold Storage Warehouses, Server Rooms, Attic Spaces and Parking Garages.

NOTE: Dry Air Pac Maintenance Kits: Proper maintenance, such as regular oil changes, desiccant replacement, and multiple filter replacements are vital to the life and performance of the Dry Air Pac. If maintenance is neglected serious problems can occur in the sprinkler system. If well maintained you can count on a long life for the Dry Air Pac and its systems. The maintenance kits include filter elements, compressor oil, and replacement desiccant. Contact us for more details.

NOTE: NFPA 13 exempts any FM approved packages from the costly requirement to connect the air intake to the freezer room. General Air Products’ Dry Air Pac™ is the only package available that meets this exemption.

FEATURES

- FM Approval
- -40° F Dew Point
- Turnkey Design for Fast Installation
- Pre-piped, Pre-wired, Pre-Tested at factory
- Lifetime Customer Service and Technical Support

WHAT’S INCLUDED

- NEMA Rated / UL Listed Motor
- Industrial Duty Compressor Pump
- Integrated Twin Tower Desiccant Dryer
- Integrated Control Panel
- Electronic Drain Valve with Timer Controls
- Combination Afterfilter / Regulator
- Compact Air Cooled Aftercooler
- UL Listed / FM Approved Air Maintenance Device
- Coalescing Pre-Filter with Differential Press. Gauge
- ASME Coded Air Receiver
- UL Listed Pressure Switch
- Hour Meter
- Dewpoint Test Port
- Bubble Tight Air Check Valve (seated in tank)
- Air Pressure Gauges
- Vibration Isolation Pads (4)
- ASME Pressure Safety Valve
- 1 Quart of Compressor Oil (shipped loose)
RESIDENTIAL PUMP & TANK PACKAGES FOR NFPA 13D

Residential Fire Protection is a growing market. One way to cut the costs of bringing a new water line to the property is to provide a NFPA 13D Pump and Tank package like our RFP System. These packages are required anywhere city water does not meet the flow and pressure required for proper operation. General Air Products has been building standard and custom RFP Systems for the past 10 years. We offer a wide range of packages that are built to order. You can expect the same level of quality, reliability and service that the fire sprinkler industry has come to know through our air compressors. Visit our web site or call us for more information on this product line.

FEATURES

- Custom Built Stainless Steel Industrial Duty Pump
- Non Ferrous Components
- Built for Easy Installation
- Water Storage Tanks of all Types, Shapes and Sizes

ECONO UNIT

BASIC WITH TANK

If it involves compressed air for fire protection we can do it!

CAPABILITIES

- Vertical Tank Mounted Units
- Special Hazard Compressors
- Explosion Proof Environment Compressors and Accessories
- Duplex Air Compressors
- Private Pressure Tank Systems
- Weather Proof Units
- Deluxe Packages that include:
  - Air Maintenance Devices
  - Any Feature Required
  - Motor Starters
  - Automatic Drains

CUSTOM AIR COMPRESSOR PACKAGES
ACCESSORIES

**AIR MAINTENANCE DEVICES:** When NFPA Code requires an Air Maintenance Device in a dry pipe system, General Air Products UL/FM Approved Air Maintenance Devices are designed to control the amount of air fed into the dry pipe system so that the volume of air available while maintaining the system pressure does not effect the valve trip time. The Air Maintenance Devices are available in two standard styles, others are available - consult factory.

**AMD 1 AIR MAINTENANCE DEVICE**

Model AMD-1 is used when compressed air is supplied through an existing factory air supply or when using tank mounted units.

**AMD 2 AIR MAINTENANCE DEVICE**

Model AMD-2 is used with our L Series lubricated compressors or any air compressor that does not have a pressure switch.

**ADDITIONAL ACCESSORIES**

- **MOTOR STARTER (LINE STARTER):** General Air Products’ IEC Line Starter is a rugged, industrial duty, full voltage, non-reversing IEC Rated overload protector. These line starters provide protection to motor windings from harmful currents that result in excess temperatures that may be caused by either overloading the motor, sustained low line voltage, or locked rotor. Even in the few instances where starters are not required by code we strongly recommend that a line starter accompany every General Air Products’ air compressor (all 3 PH. compressors and all Single Phase compressors above 1.5 HP must have a line starter for overload protection per NEC).
**RISER TANK KIT:** Designed for use with our OL Plus Series Oil Less Riser Mounted air compressors in sprinkler systems where an accelerator is added, or where space is limited but additional air storage is required.

**MANUAL DESICCANT DRYER:** General's manual desiccant dryers are used to remove water vapor from the compressed air stream. Atmospheric dew points as low as -100F are achievable when operated within rated unit specifications. Replacement desiccant kits are available.

**AUTOMATIC TANK DRAIN ASSEMBLY:** The APCX51 is designed to automatically drain liquid water and oil from compressed air receivers.

**STAINLESS STEEL FLEX HOSE:** SS Braided Flex Hose, 1/2" MPT on both ends - available in various lengths.

**AUTOMATIC DRAIN VALVE:** The "DVA" Automatic Drain Valve is designed to drain condensate from anywhere that condensate collects. The full ported solenoid valve is electrically timed by a solid state adjustable timer.

**PARTS**

The replacement parts listed below are for our current (2013 - present) fire protection air compressors only. If you require parts for models not listed in this brochure (not current), please call 800-345-8207 with the model number and serial number of the compressor in question.

**PRESSURE SWITCHES**

A pressure switch is used to regulate the pressure between two preset values on small, electrically driven air compressors - essentially telling the compressor when to start and stop. We offer a variety of pressure switches with our air compressors and each is available individually.

</tbody>
</table>

1. L Series Units do not include a pressure switch and require the purchase of an AMD-2 air maintenance device for operation
2. This is the recommended minimum wire size for single phase L Series units, consult factory for 3 phase information

## Warranty Statement

General Air Products, Inc. warrants its products to be free of defects in material and workmanship under normal use and service for 12 months from the date of purchase. Our warranty applies only when such defective parts are returned to us, or our authorized service depots, transportation prepaid, and subject to our inspection and approval. Liability is limited to repair or replacement of material found defective, free of charge, F.O.B. our plant. Motors and pumps are covered by the original manufacturer’s warranty only and should be returned by the customer to their authorized station for service. Unauthorized repairs or replacements will not be subject to factory warranty. This warranty does not cover labor at the job site. This warranty is in lieu of all other warrants, expressed or implied.

*Call or visit our website for our full warranty statement.*

All of our air compressors (OL Plus, OLT Plus, L Series, LT Series, and Dry Air Pac) have been specifically engineered and designed to meet all of the requirements of NFPA 13.
